October 10, 2019

Public Employees' Retirement Board  
100 North Park, Suite 200  
Helena, MT 59620-0139

Members of the Board:

In this report are submitted the results of the annual valuation of the assets and liabilities of the Volunteer Firefighters' Compensation Act of the State of Montana (VFCA), prepared as of June 30, 2019.

The purpose of this report is to provide a summary of the funded status of the System as of June 30, 2019. While not verifying the data at source, the actuary performed tests for consistency and reasonability. The valuation indicates that the State contribution amortizes of the unfunded accrued liability over a 5-year period. The asset values used to determine unfunded liabilities are not market values but less volatile market related values. A smoothing technique is applied to market values to determine the market related values. The unfunded liability amounts using the market value of assets would be different. The interest rate used for determining liabilities is based on the expected return on assets.

The promised benefits of the System are included in the actuarially calculated contribution rates, which are developed using the Entry Age Normal Cost Method. Four-year market related value of assets is used for actuarial valuation purposes. Gains and losses are reflected in the unfunded accrued liability that is being amortized by regular annual contributions as a level dollar amount over 5 years. The assumptions recommended by the actuary and adopted by the Board are, in the aggregate, reasonably related to the experience under the Fund and to reasonable expectations of anticipated experience under the Fund.

This is to certify that Todd Green, President and Beverly Bailey, Senior Actuary for Cavanaugh Macdonald Consulting, are members of the American Academy of Actuaries and meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinion contained herein. This also certifies that the undersigned have experience in performing valuations for public retirement systems, that the valuation was prepared in accordance with principles of practice prescribed by the Actuarial Standards Board, and that the actuarial calculations were performed by qualified actuaries in accordance with accepted actuarial procedures, based on the current provisions of the retirement system and on actuarial assumptions that are internally consistent and reasonably based on the actual experience of the System.

October 10, 2019  
Public Employees' Retirement Board  
Page 2

Future actuarial results may differ significantly from the current results presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the plan's funded status); and changes in plan provisions or applicable law. Since the potential impact of such factors is outside the scope of a normal annual actuarial valuation, an analysis of the range of results is not presented herein.

The Table of Contents, which immediately follows, outlines the material contained in the report.

Respectfully submitted,

A handwritten signature in blue ink that reads "Todd B. Green" followed by a long horizontal flourish.

## Section I: Summary of Results

For convenience of reference, the principal results of the valuation and a comparison with the preceding year's results are summarized below:

<b>VALUATION DATE</b>	<b>June 30, 2019</b>	<b>June 30, 2018</b>
Participant Counts		
Active Members	2,249	2,029
Retirees and Beneficiaries	1,487	1,473
Disabled Members	1	1
Terminated Vested Members	777	815
Terminated Non-Vested Members	-	-
Total*	4,514	4,318
Annual Retirement Allowances for Retired Members and Beneficiaries	\$ 2,985,225	\$ 2,953,203
Assets		
Actuarial value	\$ 40,008,887	\$ 38,321,273
Market value	39,866,038	38,729,625
Actuarial Accrued Liability (AAL)	\$ 47,200,070	\$ 46,305,640
Unfunded Actuarial Accrued Liability (UAAL)	\$ 7,191,183	\$ 7,984,367
Funded Ratio	84.76%	82.76%
Market Value Rate of Return	5.41%	8.68%
<b>Annual Cost</b>		
Employer Contribution Rate		
Normal Rate	\$ 102,140	\$ 91,583
Administrative Expense Load	201,971	70,586
UAAL Amortization (30 Years)	595,444	661,121
Total	\$ 899,555	\$ 823,290
Actual Contribution for Preceding Fiscal Year	\$ 2,370,454	\$ 2,212,113
Amortization Period Based on Actual Contributions	5 years	5 years

\* A reconciliation between participant counts used for the annual report and counts for the valuation appears at the beginning of Appendix D.

## Section I: Summary of Results

As a result of this actuarial valuation of the benefits in effect under the Volunteer Firefighters' Compensation Act as of June 30, 2019, the state contribution amortizes the Unfunded Actuarial Accrued Liability (UAAL) of the Retirement System over 5 years. The Funded Ratio is 84.76%.

### Calculations based on the Market Value of Assets

MCA 19-2-407 requires this report to show how market performance is affecting the actuarial funding of the Retirement System. The June 30, 2019, market value of assets is \$142,849 less than the actuarial value of assets. This is due to the smoothing of investment gains and losses over a four-year period. If the market value of assets was used, the Funded Ratio would be 84.46%.

### Additional Details

MCA 19-17-301 sets the State's contribution at an amount equal to 5.00% of the premium taxes collected from insurers.

The actuarial costs are calculated using the entry age actuarial cost method. This is the method used by most public plans. It is designed to provide a stable contribution rate as a percent of member pay. This actuarial valuation measures the adequacy of the contribution rates set in Montana State Law.

### Investment Experience

The market assets earned 5.41% net of investment expenses. As a result of prior years' unrecognized losses, the actuarial assets earned 6.93%, which is 0.72% less than the actuarial assumption of 7.65%. The return on the actuarial assets differs from the return on market assets because the actuarial value of assets spreads gains and losses over four years. The chart below shows the annual returns for the past ten years.

Year	Market Return	Actuarial Return	Assumed Investment Return	Market Return over Assumption	Actuarial Return over Assumption
7/1/2009 to 6/30/2010	12.30	(1.30)	7.75	4.55	(9.05)
7/1/2010 to 6/30/2011	20.98	(0.14)	7.75	13.23	(7.89)
7/1/2011 to 6/30/2012	1.67	2.97	7.75	(6.08)	(4.78)
7/1/2012 to 6/30/2013	12.01	11.11	7.75	4.26	3.36
7/1/2013 to 6/30/2014	16.23	12.34	7.75	8.48	4.59
7/1/2014 to 6/30/2015	4.49	8.95	7.75	(3.26)	1.20
7/1/2015 to 6/30/2016	1.84	8.30	7.75	(5.91)	0.55
7/1/2016 to 6/30/2017	11.51	7.89	7.75	3.76	0.14
7/1/2017 to 6/30/2018	8.68	6.59	7.65	1.03	(1.06)
7/1/2018 to 6/30/2019	5.41	6.93	7.65	(2.24)	(0.72)

Asset gains or losses result when the return on the actuarial value of assets differs from the investment return assumption.

## Section I: Summary of Results

---

### Amortization of the UAAL

The total contribution for the current fiscal year is estimated to be equal to the previous year's State contribution. The amount available to amortize the unfunded actuarial accrued liability of the System is equal to the total State contribution reduced by amounts for normal cost and anticipated administrative expenses. The total State contribution for the June 30, 2018, actuarial valuation was equal to \$2,212,113. This contribution was sufficient to amortize the actuarial unfunded accrued liability over a 5-year period. The total State contribution for the June 30, 2019, valuation is equal to \$2,370,454. This amount is sufficient to amortize the unfunded actuarial accrued liability over a 5-year period.

### Funding and Benefits Policy

The Montana Public Employees' Retirement Board has adopted a Funding and Benefits Policy to provide general guidelines to help ensure decisions are made based on sound, consistent, and thoroughly examined criteria. The Funding and Benefits Policy includes guidance on the following topics:

#### 1) Funding Requirement

a) The Funding and Benefits Policy states:

1. The Entry Age Normal Cost Method shall be applied to the projected benefits in determining the Normal Cost and Actuarial Accrued Liability.
2. Asset smoothing can be used in the valuation process to spread the recognition of investment gains and losses over a four-year period.
3. The unfunded actuarial accrued liability should be amortized over a reasonable period of time and should not exceed 30 years on a rolling basis. Generally, the funding period should be constant or decreasing.

b) Analysis: The liabilities of the System are determined using the Entry Age Normal Cost Method and are compared to the actuarial value of assets, which are developed using asset smoothing that recognizes gains and losses over a four-year period. Finally, the amortization period as of June 30, 2019 is 5 years based on the actuarial value of assets. The current employer contributions fund the System within the Board's policy guidelines.

#### 2) Funding Objectives

a) The Funding and Benefits Policy states: "The primary objectives are to: 1) ensure that the systems are financially sound and pay all benefits promised using assets accumulated from required employer and member contributions and investment income; and 2) achieve a well-funded status with a range of safety to absorb market volatility without creating a UAL."

b) Analysis: The State contributions provided for in statute are sufficient to amortize the unfunded actuarial accrued liability within a 5-year period. This ensures that the System is financially sound and will be able to pay all promised benefits and achieve a well-funded status with a range of safety to absorb market volatility without creating an additional UAAL.

## **Section I: Summary of Results**

---

### 3) Benefit Enhancements

- a) The Funding and Benefits Policy states: “Proposals must provide funding from sources sufficient to cover future costs. Unfunded liabilities created by the proposal must be amortized over a period of time appropriate to the retirement system, but not more than 30 years.”
- b) Analysis: Without supplemental funding, a benefit enhancement would increase the amortization period of the unfunded actuarial accrued liability and further delay the goal of achieving a well-funded status with a range of safety to absorb market volatility without extending the amortization period.

## Section I: Summary of Results

### Sensitivity to Future Experience

The valuation results are projections based on the actuarial assumptions. Actual experience will differ from these assumptions, either increasing or decreasing the ultimate cost. The following illustrations provide simple analyses on how the costs are sensitive to changes in the assumed rate of return.

Investment Return – The investment return generally has the largest impact on the funding of the System.

Impact of Assuming 1.0% Higher Investment Return			
	<u>Funded Ratio</u>	<u>Amortization Period</u>	<u>Actuarially Determined Employer Contribution (Millions \$)*</u>
Current Assumption 7.65%	84.76%	5 Years	\$2.4
Higher Assumption 8.65%	<u>92.63</u>	<u>2 Years</u>	<u>1.1</u>
Change - Increase / (Decrease)	7.87%	(3) Years	(\$1.3)
Impact of Assuming 0.5% Higher Investment Return			
	<u>Funded Ratio</u>	<u>Amortization Period</u>	<u>Actuarially Determined Employer Contribution (Millions \$)*</u>
Current Assumption 7.65%	84.76%	5 Years	\$2.4
Higher Assumption 8.15%	<u>88.68</u>	<u>3 Years</u>	<u>1.5</u>
Change - Increase / (Decrease)	3.92%	(2) Years	(\$0.9)
Impact of Assuming 0.5% Lower Investment Return			
	<u>Funded Ratio</u>	<u>Amortization Period</u>	<u>Actuarially Determined Employer Contribution (Millions \$)*</u>
Current Assumption 7.65%	84.76%	5 Years	\$2.4
Lower Assumption 7.15%	<u>80.88</u>	<u>6 Years</u>	<u>2.6</u>
Change - Increase / (Decrease)	(3.88%)	1 Years	\$0.2
Impact of Assuming 1.0% Lower Investment Return			
	<u>Funded Ratio</u>	<u>Amortization Period</u>	<u>Actuarially Determined Employer Contribution (Millions \$)*</u>
Current Assumption 7.65%	84.76%	5 Years	\$2.4
Lower Assumption 6.65%	<u>77.03</u>	<u>8 Years</u>	<u>3.1</u>
Change - Increase / (Decrease)	(7.73%)	3 Years	\$0.7

\* Amounts reflect estimated increase/(decrease) in FY2020 employer contributions only, in order to maintain the 5 year amortization period.

## Section I: Summary of Results

The future funding status of the System will be determined by the System’s experience. The System’s actual asset returns and retirement rates, as well as member longevity, salary increases, withdrawal rates, disability rates and future legislation will all impact the funding status of the System. The entry age normal cost method and four year smoothing of asset gains and losses will help to provide a more orderly funding of the System’s liabilities, but will not change the actual experience. The amortization of the UAAL is not likely to remain level with each passing actuarial valuation. Instead, the amortization amount is expected to decrease slightly on average, reflecting gains and losses due to experience different than the actuarial assumptions.

### Assumption Changes

There have been no assumption changes since the previous valuation.

### Benefit Changes

There have been no benefit changes since the previous valuation.

### Contribution Changes

There have been no contribution changes since the previous valuation.

### Method Changes

There have been no method changes since the previous valuation.

### Impact of Changes

The following table summarizes how experience has changed the UAAL since the June 30, 2018 Actuarial Valuation. Further detail can be found in Table 10.

#### Changes in the Unfunded Actuarial Accrued Liability (UAAL)

June 30, 2018 Valuation UAAL	\$7,984,367
Normal Cost (Including Expenses)	388,449
Contributions	(2,370,454)
Interest	549,851
Expected June 30, 2019 UAAL	\$6,552,213
Experience (Gain)/Loss on Actuarial Liabilities	\$364,831
Experience (Gain)/Loss on Actuarial Assets	274,139
Assumption & Method Changes	0
Plan Changes	0
Total (Gain)/Loss	\$638,970
June 30, 2019 Valuation UAAL	\$7,191,183

## Section I: Summary of Results

---

### Summary

- \* The System's actuarial value investment return of 6.93% for the year ended June 30, 2019, is 0.72% less than the actuarial assumption of 7.65%. This represents an asset loss of \$274,139 due to investment return less than anticipated. As of June 30, 2019, the market value of assets was \$39,866,038. As of June 30, 2019, the actuarial value of assets was \$40,008,887. The June 30, 2019 market value of assets will be recognized in future actuarial valuations unless it is offset by returns greater than the 7.65% assumption.
  
- \* As of June 30, 2019, the amortization period of the UAAL is 5 years. Prior to this valuation, the funding period was 5 years. An increase in the employer contribution maintained the amortization period of 5 years despite actuarial losses that occurred during the year.
  
- \* The funding of the retirement system will be impacted by future experience, which will sometimes be more favorable than the actuarial assumptions and sometimes less favorable. In particular, investment returns larger and smaller than the 7.65% assumption are expected to have significant impacts on the System's funding progress. In the long term, the favorable experience is needed to offset the less favorable experience. This is the reason for using an actuarial value of assets that allows gains and losses to be smoothed over four years.

## Section I: Summary of Results

---

### Projected Progress toward 100% Funding

The table below shows the projected progress toward reaching 100%. When the System is 100% funded, the Unfunded Actuarial Accrued Liability will be fully amortized. This is scheduled to occur within 5 years. The ultimate goal of the VFCA System is to become at least 100% funded and to establish a reserve equal to 10% of the Systems Actuarial Accrued Liability.

## Section II: Assets

---

### Assets

In many respects, an actuarial valuation can be regarded as an inventory process. The inventory is taken as of the actuarial valuation date, which for this valuation is June 30, 2019. On that date, the assets available for the payment of benefits are appraised. These assets are compared with the actuarial liabilities. The actuarial process thus leads to a method of determining what contributions by members and their employers are needed to strike a balance.

The asset valuation method being used is a four-year smoothing method. The expected return is determined each year based on the beginning of year market value and actual cash flows during the year. Any difference between the expected market value return and the actual market value return is recognized evenly over a period of four years.

Table 1 lists the assets held and their market value for the past two years. Table 2 summarizes the fund's activity during the past two years. Table 3 summarizes the determination of the actuarial value of assets. Table 4 summarizes historical asset returns for the last 10 years including the amount recognized by the actuarial asset valuation method which was greater or less than the actuarial investment return assumption. Table 5 summarizes the historical asset values on a market value and actuarial value basis, to the extent it was available. Additional data can be included in this table for future reports, if provided by the System.

\* Returns reflect all investment returns, including investment income and realized and unrealized investment gains and losses, and are net of investment expenses and administrative expenses paid by the System.

Section II: Assets

Table 5:  
Market Value of Assets vs. Actuarial Value of Assets

### **Section III: Actuarial Present Value of Future Benefits**

---

#### **Actuarial Present Value of Future Benefits**

In the previous section, an actuarial valuation was related to an inventory process, and an analysis was given of the inventory of assets of the System as of the valuation date. In this section, the discussion will focus on the commitments of the System, which will be referred to as its actuarial liabilities.

Table 6 contains an analysis of the actuarial present value of all future benefits for active members, for retirees, and for beneficiaries. The analysis is given by type of benefit.

The actuarial liabilities summarized in Table 6 include the actuarial present value of all future benefits expected to be paid with respect to each member covered as of the valuation date. For an active member, this value includes a measure of both benefits already earned and future benefits to be earned. Thus, for all members, active and retired, the value extends over benefits earnable and payable for the rest of their lives and, if an optional benefit is chosen, for the lives of their surviving beneficiaries.

The actuarial valuation does not recognize liabilities for employees who become members and participate in the System after the valuation date.

**Section III: Actuarial Present Value of Future Benefits**

**Table 6:  
Actuarial Present Value of Future Benefits for Actives,  
Retirees, and Beneficiaries**

\*Includes survivors of retired and active members.

## **Section IV: Employer Contributions**

---

### **Employer Contributions**

In the previous two sections, attention has been focused on the assets and the present value of all future benefits of the System. A comparison of Tables 3 and 6 indicates that there is a shortfall in current actuarial assets to meet the present value of all future benefits for current members and beneficiaries.

In an active system, there will always be a difference between the assets and the present value of all future benefits. An actuarial valuation sets a schedule of future contributions that will deal with this funding in an orderly fashion.

The method used to determine the incidence of the contributions in various years is called the actuarial cost method. For this valuation, the entry age actuarial cost method has been used. A description of the entry age actuarial cost method is provided in Appendix A. Under this method, or essentially any actuarial cost method, the contributions required to meet the difference between current assets and the present value of all future benefits are allocated each year between three elements:

- A normal cost amount, which ideally is relatively stable as a percentage of salary over the years;
- A load for administrative expenses; and
- An amount which is used to amortize the UAAL.

The two items described above, normal cost and UAAL, are the keys to understanding the actuarial cost method. Let us first discuss the normal cost.

The normal cost is the theoretical contribution rate, which will meet the ongoing costs of a group of average new employees. Suppose that a group of new employees were covered under a separate fund from which all benefits and to which all contributions and associated investment return were to be paid. Under the entry age actuarial cost method, the normal cost contribution rate is that level percentage of pay which would be exactly right to maintain this fund on a stable basis. If experience were to follow the actuarial assumptions exactly, the fund would be completely liquidated with the last payment to the last survivor of the group.

The assumed investment rate of return is 7.65%, net of investment expenses only. As a result, the actuarially determined contribution must include an amount for administrative expenses expected to occur during the year.

We have determined the normal cost rates separately by type of benefit under the System. These are summarized in Table 7. In Table 7 we also provide a summary of the member and employer statutory contributions.

The term "fully funded" is often applied to a system where contributions for everyone at the normal cost rate will fully pay for the benefits of existing as well as new employees. Often, systems are not fully funded, either because of benefit improvements in the past that have not been completely paid for or actuarial deficiencies that have occurred because experience has not been as anticipated. Under these circumstances, a UAAL exists.

#### **Section IV: Employer Contributions**

---

Table 8 shows how the UAAL was derived for the System. Lines A and B show, respectively, the total present value of future benefits and the portion of the future liability that is expected to be paid from future normal cost contributions, both employer and employee. The future normal cost contributions are the portion of the present value of future benefits that are attributed to future years of service that have not been earned yet by the active membership. Line C shows the actuarial accrued liability. Line D shows the amount of assets available for benefits. Line E shows the UAAL.

The UAAL at any date after establishment of a system is affected by any actuarial gains or losses arising when the actual experience of the system varies from the experience anticipated by the actuarial assumptions used in the valuations. To the extent actual experience as it develops differs from the assumptions used, so also will the actual emerging costs differ from the estimated costs. The impact of these differences in actual experience from the assumptions is included in Section 1, the Summary of Findings.

**Section IV: Employer Contributions**

	<b>June 30, 2019</b>	<b>June 30, 2018</b>
A. Actuarial present value of all future benefits for present members, retirees and their survivors (Table 6)	\$ 47,555,585	\$ 46,625,677
B. Less actuarial present value of total future normal costs for present members	<u>355,515</u>	<u>320,037</u>
C. Actuarial accrued liability	\$ 47,200,070	\$ 46,305,640
D. Less assets available for benefits	<u>40,008,887</u>	<u>38,321,273</u>
E. Unfunded actuarial accrued liability	\$ 7,191,183	\$ 7,984,367

## Section V: Cash Flows

---

### Cash Flows

The fundamental equation for funding a retirement system is that benefits and administrative expenses must be provided for by contributions (past and future) and investment income. When a retirement system matures, benefits and administrative expenses often exceed contributions. In this case we say the system has a “negative cash flow.” Mature systems are characterized by negative cash flows and large pools of assets. This is natural. Actuarial funding is designed to accumulate large pools of assets which will in turn provide investment income and finance negative cash flows when systems mature. If the fund is looked at as a whole, investment income is usually larger than the difference between contributions and benefit payments. The retirement system’s investment strategy should maximize potential returns at a prudent level of risk while providing for needed cash flows.

Table 9 shows the System had a positive cash flow for the year ended June 30, 2019. The System’s total cash flow including benefit payments, administrative expenses and investment earnings was \$1.2 million. Of the \$1.2 million, \$2.1 million was due to investment returns.

If the System had a positive cash flow, there would be no need to plan where the funds would come from to pay benefits since benefits could be paid by incoming contributions. A negative cash flow, as defined above, requires planning what funds will be used to pay the difference between benefits and contributions.

**Section V: Cash Flows**

**Table 9:  
Cash Flow History  
(Dollar amounts in millions)**

Year Ended June 30	Historical Cash Flows			
	Contributions	Benefits & Administrative Expenses	Investment Income	Net Cash Flow
2010	\$ 1.6	\$ 1.9	\$ 2.6	\$ 2.3
2011	1.6	2.0	4.8	4.4
2012	1.6	2.2	0.6	0.0
2013	1.7	3.0	3.4	2.1

2018	2.2	3.2	3.1	2.1
2019	2.4	3.3	2.1	1.2

## **Section VI: Actuarial Gains of Losses**

---

### **Actuarial Gains or Losses**

An analysis of actuarial gains or losses is performed in conjunction with all regularly scheduled valuations.

The developments of the gains or losses related to the actuarial liability and the assets are shown in Table 10. The results of our analysis of the financial experience of the System in the three most recent regular actuarial valuations are presented in Table 11. Each gain or loss shown represents our estimate of how much the given type of experience caused the Unfunded Actuarial Accrued Liability or Funding Reserve to change in the period since the previous actuarial valuation.

Gains and losses shown due to demographic sources are approximate. Demographic experience is analyzed in greater detail in our periodic experience studies.

Non-recurring gains and losses result from changes in the actuarial assumptions and benefit improvements.

**Section VI: Actuarial Gains of Losses**

**Table 10:  
Analysis of Actuarial (Gains) or Losses\***

<b>A. ACTUARIAL ACCRUED LIABILITY (GAIN) / LOSS ANALYSIS</b>	
1. Actual Actuarial Accrued Liability as of June 30, 2018:	\$ 46,305,640
2. Normal Cost for this Plan Year (Including Expenses):	388,449
3. Interest on items 1 and 2 [(1+2) x 7.65%]:	3,572,098
4. Benefit Payments for this Plan Year (Including Expenses):	(3,304,549)
5. Interest on item [4 x 7.65% x .5]:	(126,399)
6. Expected Actuarial Accrued Liability as of June 30, 2019:	<u>\$ 46,835,239</u>
7. Changes due to:	
a. Assumption Changes:	-
b. Plan Amendments:	-
c. Funding Method:	-
d. Actuarial (Gain) / Loss:	\$ 364,831
8. Actual Actuarial Accrued Liability as of June 30, 2019:	<u>\$ 47,200,070</u>
9. Items Affecting Calculation of Unfunded Accrued Actuarial Liability:	
a. Benefit provisions reflected in the unfunded accrued liability (see Appendix C)	
b. Actuarial assumptions and methods used to determine actuarial accrued liability (see Appendix B)	
<b>B. ASSET (GAIN) / LOSS ANALYSIS</b>	
1. Actuarial Value of Assets as of June 30, 2018:	\$ 38,321,273
2. Interest on item [1 x 7.65%]:	2,931,577
3. Contributions for this Plan Year:	2,370,454
4. Interest on item [3. x 7.65% x .5]:	90,670
5. Benefit Payments for this Plan Year (Including Expenses):	(3,304,549)
6. Interest on item [5. x 7.65% x .5]:	(126,399)
7. Expected Actuarial Value of Assets as of June 30, 2019:	<u>\$ 40,283,026</u>
8. Actuarial Value of Assets as of June 30, 2019:	<u>\$ 40,008,887</u>
9. (Gain) / Loss:	<u>\$ 274,139</u>
<b>C. UNFUNDED ACTUARIAL ACCRUED LIABILITY (GAIN) / LOSS ANALYSIS</b>	
1. Actual Unfunded Actuarial Accrued Liability as of June 30, 2018:	\$ 7,984,367
2. Normal Cost for this Plan Year (Including Expenses):	388,449
3. Contributions for this Plan Year:	(2,370,454)
4. Interest on items 1 - 3: [(1+2) x 7.65% + (3 x 7.65% x .5)]:	549,851
5. Expected Unfunded Actuarial Accrued Liability as of June 30, 2019:	<u>\$ 6,552,213</u>
6. Changes due to:	
a. Assumption Changes:	-
b. Plan Amendments:	-
c. Funding Method:	-
d. Actuarial (Gain) / Loss:	\$ 638,970
7. Actual Unfunded Actuarial Accrued Liability as of June 30, 2019:	<u>\$ 7,191,183</u>

\* Effects related to gains are shown in parentheses. Numerical results are expressed as a (decrease) increase in the Unfunded Actuarial Accrued Liability (UAAL). Gains decrease the UAAL and losses increase the UAAL.

**Section VI: Actuarial Gains of Losses**

<b>Non-Recurring Items.</b>			
Changes in actuarial assumptions and methods	-	-	2,124,410
Changes in benefits caused a (gain) loss	-	-	-
<b>Composite (Gain) Loss During Period</b>	<b>\$ 638,970</b>	<b>\$ 271,905</b>	<b>\$ 1,456,879</b>

\* Effects related to gains are shown in parentheses. Numerical results are expressed as a (decrease)/increase in the Unfunded Actuarial Accrued Liability (UAAL). Gains decrease the UAAL and losses increase the UAAL.

## **Section VII: Risk Considerations**

---

Actuarial Standards of Practice are issued by the Actuarial Standards Board and are binding on credentialed actuaries practicing in the United States. These standards generally identify what the actuary should consider, document and disclose when performing an actuarial assignment. In September, 2017, Actuarial Standard of Practice Number 51, *Assessment and Disclosure of Risk in Measuring Pension Obligations*, (ASOP 51) was issued as final with application to measurement dates on or after November 1, 2018. This ASOP, which applies to funding valuations, actuarial projections, and actuarial cost studies of proposed plan changes, is first applicable for the June 30, 2019 actuarial valuation for the System.

A typical retirement plan faces many different risks, but the greatest risk is the inability to make benefit payments when due. If plan assets are depleted, benefits may not be paid which could create legal and litigation risk or the plan could become “pay as you go”. The term “risk” is most commonly associated with an outcome with undesirable results. However, in the actuarial world, risk can be translated as uncertainty. The actuarial valuation process uses many actuarial assumptions to project how future contributions and investment returns will meet the cash flow needs for future benefit payments. Of course, we know that actual experience will not unfold exactly as anticipated by the assumptions and that uncertainty, whether favorable or unfavorable, creates risk. ASOP 51 defines risk as the potential of actual future measurements to deviate from expected results due to actual experience that is different than the actuarial assumptions.

The various risk factors for a given plan can have a significant impact – positive or negative – on the actuarial projection of liability and contribution rates.

There are a number of risks inherent in the funding of a defined benefit plan. These include:

- economic risks, such as investment return and price inflation;
- demographic risks such as mortality, payroll growth, aging population including impact of baby boomers, and retirement ages;
- contribution risk, i.e., the potential for contribution rates to be too high for the plan sponsor/employer to pay and
- external risks such as the regulatory and political environment.

There is a direct correlation between healthy, well-funded retirement plans and consistent contributions equal to the full actuarial contribution rate each year. The System is primarily funded by State contributions that are equal to 5% of certain fire insurance premium taxes collected and passed through the general fund. These contributions, together with the earnings on these accumulated contributions fund benefit accruals for current active members and administrative expenses. The remainder of the contributions amortizes the unfunded actuarial accrued liability. The contribution rates are set by state statute and intended to provide the needed amounts to fund the system over time. The purpose of the valuation is to determine if the fixed employer and member contributions remain sufficient to fund the Plan. Due to the fixed nature of the contributions actuarial gains and losses are reflected in the amortization period. Generally, the largest source of actuarial gains and losses are caused by investment volatility. A key risk factor to the System’s funding is that over time, the Statutory Contribution Rates will be insufficient to accumulate enough funds, with investment income, to fund the promised benefits.

## **Section VII: Risk Considerations**

---

The other significant risk factor for the System is investment return because of the volatility of returns and the size of plan assets compared to payroll. This is to be expected, given the underlying capital market assumptions and the System's asset allocation. To the extent market rates of interest affect the expected return on assets, there is a risk of change to the discount rate which determines the present value of liabilities and actuarial valuation results. Please see the summary of results of this report which demonstrates the sensitivity of valuation results to differing discount rates.

A key demographic risk for the Retirement System is improvements in mortality (longevity) greater than anticipated. While the actuarial assumptions reflect a margin for improvement in mortality experience these assumptions are refined every experience study, the risk arises because there is a possibility of some sudden shift, perhaps from a significant medical breakthrough that could quickly increase liabilities. Likewise, there is some possibility of a significant public health crisis that could result in a significant number of additional deaths in a short time period, which would also be significant, although more easily absorbed. While either of these events could happen, it represents a small probability and thus represents much less risk than the volatility associated with investment returns.

The following exhibits summarize some historical information that helps indicate how certain key risk metrics have changed over time. Many are due to the maturing of the retirement system.

## Section VII: Risk Considerations

---

### Historical Asset Volatility Ratios (in 1,000's)

As a retirement system matures, the size of the market value of assets increases relative to the covered payroll of active members, on which the System is funded. The size of the plan assets relative to covered payroll, sometimes referred to as the asset volatility ratio, is an important indicator of the contribution risk for the System. The higher this ratio, the more sensitive a plan's contribution rate is to investment return volatility. In other words, it will be harder to recover from investment losses with increased contributions.

<b>Actuarial Valuation Date</b>	<b>Market Value of Assets</b>	<b>Estimated Plan Year Payroll</b>	<b>Asset Volatility Ratio</b>
6/30/2015	34,104	0	N/A
6/30/2016	33,883	0	N/A
6/30/2017	36,630	0	N/A
6/30/2018	38,730	0	N/A
6/30/2019	39,866	0	N/A

Since funding of the System is not based on payroll, the Assets Volatility Ratio is irrelevant in this case.

## Section VII: Risk Considerations

---

### Historical Cash Flows (in 1,000's)

Plans with negative cash flows will experience increased sensitivity to investment return volatility. Cash flows, for this purpose, are measured as contributions less benefit payments and administrative expenses. If the System has negative cash flows and then experiences returns below the assumed rate, there are fewer assets to be reinvested to earn the higher returns that typically follow. While any negative cash flow will produce such a result, it is typically a negative cash flow of more than 5% of MVA that may cause significant concerns. The System has negative cash flows which ranged from 1.90% to 2.97% for the prior five years.

<b>Year End</b>	<b>Market Value of Assets (MVA)</b>	<b>Contributions</b>	<b>Benefit Payments</b>	<b>Net Cash Flow</b>	<b>Net Cash Flow as a Percent of MVA</b>
6/30/2015	34,104	1,913	2,560	(647)	(1.90%)
6/30/2016	33,883	2,036	2,877	(841)	(2.48%)
6/30/2017	36,630	2,065	3,154	(1,089)	(2.97%)
6/30/2018	38,730	2,212	3,248	(1,036)	(2.67%)
6/30/2019	39,866	2,370	3,305	(935)	(2.35%)

## Section VII: Risk Considerations

### Liability Maturity Measurement

Most public sector retirement systems have been in operation for many years. As a result, they have aging plan populations, and in some cases declining active populations, resulting in an increasing ratio of retirees to active members and a growing percentage of retiree liability. The retirement of the remaining baby boomers over the next decade is expected to further exacerbate the aging of the retirement system population. Retiree liability as a percentage of the total actuarial accrued liability has been growing over the last five years. As more of the total liability begins to reside with retirees, investment volatility has a greater impact on the funding of the system since it is more difficult to restore the system financially after losses occur when there is comparatively less payroll over which to spread costs. Below are two tables which demonstrate the ratio of the System's retiree liability compared to the total accrued liability and the ratio of the number of retirees and beneficiaries to the number of active members.

<b>Year End</b>	<b>Retiree Liability (a)</b>	<b>Total Actuarial Accrued Liability (b)</b>	<b>Retiree Percentage (a) / (b)</b>
6/30/2015	31,520,180	44,318,250	71.1%
6/30/2016	31,852,441	44,010,066	72.4%
6/30/2017	33,571,977	45,871,379	73.2%
6/30/2018	34,098,356	46,305,640	73.6%
6/30/2019	33,978,475	47,200,070	72.0%

### Historical Member Statistics

<b>Valuation Date June 30,</b>	<b>Number of</b>		<b>Active/ Retired</b>
	<b>Active</b>	<b>Retired</b>	
2015	1,977	1,371	1.44
2016	1,895	1,425	1.33
2017	1,957	1,438	1.36
2018	2,026	1,474	1.37
2019	2,249	1,488	1.51

## **Appendix A: Actuarial Procedures and Methods**

---

The assumptions and methods utilized in the valuation were developed in the six-year experience study for the period ending June 30, 2016.

Tables B-2 through B-4 give rates of decrement for service retirement, disablement, mortality, and other terminations of employment.

### **Actuarial Cost Method**

The actuarial valuation was prepared using the entry age actuarial cost method. Under this method, the actuarial present value of the projected benefits of each individual included in the valuation is allocated as a level percentage of the individual's projected compensation between entry age and assumed exit. The portion of this actuarial present value allocated to a valuation year is called the normal cost. The normal cost was first calculated for each individual member. The normal cost rate is the total of the individual normal costs, divided by the total pay rate.

The portion of this actuarial present value not provided for at a valuation date by the sum of (a) the actuarial value of the assets and (b) the actuarial present value of future normal costs is called the UAAL. The UAAL is amortized as a level percentage of the projected salaries of present and future members of the System.

### **Records and Data**

The data used in the valuation consists of financial information, records of age, sex, service, salary, contribution rates, and account balances of contributing members and records of age, sex, and amount of benefit for retired members and beneficiaries. All of the data was supplied by the System and has been accepted for valuation purposes without audit.

### **Replacement of Terminated Members**

The ages at entry and distribution by sex of future members are assumed to average the same as those of the present members they replace. If the number of active members should increase, it is further assumed that the average entry age of the larger group will be the same, from an actuarial standpoint, as that of the present group. Under these assumptions, the normal cost rates for active members will not vary with the termination of present members.

### **Administrative and Investment Expenses**

The investment expenses of the System are assumed to be funded by investment earnings in excess of 7.65% per year.

Administrative expenses are assumed to equal \$201,971 in fiscal year end 2019.

## **Appendix A: Actuarial Procedures and Methods**

---

### **Valuation of Assets**

The actuarial asset valuation method spreads asset gains and losses over four years. The expected return is determined each year based on the beginning of year market value and actual cash flows during the year. Any difference between the expected market value return and the actual market value return is recognized evenly over a period of four years.

### **Investment Earnings**

The annual rate of investment earnings of the assets of the System is assumed to be 7.65% per year net of investment expenses, compounded annually.

### **Service Retirement**

Table B-2 shows the annual assumed rates of retirement among members eligible for service retirement. Separate rates are used when a member is eligible for reduced benefits, for the first year a member is eligible for full benefits, and for the years following the first year a member is eligible for full benefits.

### **Disablement**

There are no rates of disablement used in this valuation.

### **Mortality**

The mortality rates used in this valuation are illustrated in Table B-3. A written description of each table used is included in Table B-1.

### **Other Terminations of Employment**

The rates of assumed future withdrawal from active service for reasons other than death, disability or retirement are shown for representative ages in Table B-4.

### **Probability of Marriage and Dependent Children**

If death occurs in active status, all members are assumed to have an eligible spouse with no dependent children. Female spouses are assumed to be three years younger than males.

**Appendix B: Summary of Valuation Assumptions**

---

**Table B-1**

**Summary of Valuation Assumptions**

I. Economic assumptions	
A. Investment return	7.65%
B. Price Inflation Assumption	2.75%
C. Growth in membership	0.00%
II. Demographic assumptions	
A. Retirement	Table B-2
D. Mortality among contributing members, service retired members, and beneficiaries. The tables include margins for mortality improvement which is expected to occur in the future. For Males and Females: RP 2000 Combined Employee and Annuitant Mortality Table projected to 2020 using Scale BB, set back one year for males.	Table B-3
E. Mortality among disabled members For Males and Females: RP 2000 Combined Employee and Annuitant Mortality Table.	Table B-3
F. Other terminations of employment	Table B-4

**Appendix B: Summary of Valuation Assumptions**

---

**Table B-2**  
**Retirement**  
**Annual Rates**

Age	10 to 19 Years of Service	20 or More Years of Service
Less than 55	0.0%	0.0%
55	0.0	40.0
56	0.0	40.0
57	0.0	40.0

## Appendix C: Summary of Benefit Provisions

---

<b>Type of plan</b>	<ul style="list-style-type: none"><li>Multiple-employer cost-sharing</li></ul>
<b>Membership eligibility</b>	<ul style="list-style-type: none"><li>Unpaid volunteer firefighters serving with qualified volunteer fire companies in unincorporated areas throughout the state.</li></ul>
<b>Member contributions</b>	<ul style="list-style-type: none"><li>No member contributions</li></ul>
<b>State contributions</b>	<ul style="list-style-type: none"><li>5% of certain fire insurance premium taxes collected and passed through the general fund</li></ul>
<b>Credit for service</b>	<p>To receive a year of credit for service, a volunteer firefighter must:</p> <ul style="list-style-type: none"><li>Serve with a single fire company for an entire fiscal year, <b>and</b></li><li>Receive a minimum of 30 hours of training.</li><li>Fractional years <b>are not</b> credited.</li></ul>
<b>Normal retirement eligibility and benefit formula</b>	<ul style="list-style-type: none"><li>Age 55 with 20 years of credit for service, <b>or</b></li><li>Age 60 with 10 years of credit for service</li><li>\$8.75 per month x year of credit for service up to 20 years</li><li>\$7.50 per month x year of credit for service after 20 years</li><li>For VFCA members retiring <b>prior to</b> July 1, 2011, maximum credited service is 30 years</li><li>VFCA members retiring <b>on or after</b> July 1, 2011, will receive \$7.50 per month for each additional year of credited service after 30 years in each year that the trust is actuarially sound and the amortization period is 20 years or less; otherwise benefits for the year will only be paid on credited service up to 30 years.</li></ul>
<b>Duty-related disability retirement eligibility and benefit formula</b>	<ul style="list-style-type: none"><li>Any current member on a fire company's roster</li><li><b>The greater of:</b><ul style="list-style-type: none"><li>a. \$87.50 per month, <b>or</b></li><li>b. (\$8.75 per month x year of credit for service up to 20 years) + (\$7.50 per month x year of credit for service after 20 years up to 30 years of credit for service)</li></ul></li></ul>
<b>Survivor's eligibility and benefit formula</b>	<ul style="list-style-type: none"><li>10 years of credit for service or a retired member</li><li>A monthly survivor benefit to the surviving spouse (or equally to dependent children if there is no surviving spouse or after a surviving spouse dies, for as long as they remain dependent children) equal to the full benefit otherwise payable to the member.</li><li>Survivor benefits terminate when benefits have been paid for a total of 40 months, including any benefits paid to the retired member prior to death.</li></ul>
<b>Changes since last valuation</b>	<ul style="list-style-type: none"><li>None</li></ul>

**Appendix D: Valuation Data**

**Valuation Data**

This chart is presented for informational purposes only. The counts shown in the valuation line were used for preparation of the liabilities disclosed within this report. The counts disclosed for the Annual Financial Report and the Summary of Results (page 1) match the CAFR at the request of the Board. The differences between counts, if any, have no material effect upon the liability calculation.

	<u>Active</u>	<u>Disabled</u>	<u>Retirees and Beneficiaries</u>	<u>Terminated Vested Members</u>	<u>Total</u>
<b>Participant Counts Used for Valuation</b>	2,245	1	1,487	777	4,510
Disabled Members having attained normal retirement age					
Beneficiaries of Disabled Members					
Beneficiaries with less than one year of certain payments remaining					
Other Adjustments	4				4
<b>Participant Counts shown in the Annual Financial Report</b>	2,249	1	1,487	777	4,514

## Appendix D: Valuation Data

---

This valuation is based upon the membership of the System as of June 30, 2019. Membership data was supplied by the System and has been accepted for valuation purposes without audit. However, tests were performed to ensure that the data is sufficiently accurate for valuation purposes.

<u>Active Members</u>	<u>Number</u>
Full-Time Members	2,245

Table D-1 contains summaries of the data for active members. For full-time members, values shown in the tables are the numbers of members and their service.

Table D-2 presents distributions of the following:

- Members receiving service retirement benefits.
- Members receiving disability retirement benefits.
- Survivors of deceased retired members receiving benefits.
- Survivors of deceased active members.
- Terminated vested members.

Table D-3 is a reconciliation of membership data from June 30, 2018 to June 30, 2019.

**Appendix D: Valuation Data**

The following is a summary of retired members and beneficiaries currently receiving benefits. The chart reflects the counts and benefits used for valuation purposes as a result of data processing. Please refer to the chart on page 38 for an explanation of the number of annuitants used for valuation purposes.

<u>Type of Annuitant</u>	<u>Number</u>	<u>Annual Benefits</u>	<u>Average Annual Benefits</u>
Service Retirement	1,484	\$ 2,978,010	\$ 2,007
Survivors of Deceased Retired Members	0	-	-
Survivors of Deceased Active Members	3	6,165	2,055

## **Appendix E: Comparative Schedules**

---

### **Comparative Schedules**

This section contains tables that summarize the experience of the System shown in present and past valuation reports.

Table E-1 shows a summary of the active members covered as of the various valuation dates.

Table E-2 shows a summary of the retired and inactive members as of the various valuation dates.

Table E-3 summarizes the contribution amounts determined by each annual actuarial valuation.

**Table E-1:  
Active Membership Data**

<u>Valuation Date (June 30)</u>	<u>Actives</u>	<u>Average Age</u>	<u>Average Years of Service</u>	<u>Average Hire Age</u>
2019	2,249	45.3	9.2	36.1
2018	2,026	45.6	9.2	36.3
2017	1,957	45.5	9.5	36.0
2016	1,895	45.6	9.8	35.8
2015	1,977	46.0	9.8	36.2
2014	1,935			
2013	2,101			
2012	2,106			

Appendix E: Comparative Schedules

Table E-2:
Members in Receipt of Annuities and Inactive Membership Data

Table with 9 columns: Valuation Date (June 30), Number, Annual Benefits in Thousands, Average Annual Benefit, Average Current Age, Average Age at Retirement, Average Service at Retirement, Number Vested Terminated, Number Non-Vested Terminated. Rows for years 2012-2019.

Appendix E: Comparative Schedules

Table E-3: Contribution Amounts

Valuation Date (June 30)	Calculated Employer Contribution	Normal Cost Amount*	UAAL Amount**	Actual State Contribution***
2019	\$ 899,555	\$ 304,111	\$ 595,444	
2018	\$ 823,290	\$ 162,169	\$ 661,121	2,370,454
2017	915,642	177,318	738,824	2,212,113
2016	1,109,996	271,371	838,625	2,064,561
2015	1,331,372	280,441	1,050,931	2,036,297
2014	890,358	245,657	644,701	1,913,482
2013	1,116,227	197,941	843,867	1,818,237
2012	1,125,222	199,294	879,482	1,711,321

\* Includes administrative expenses starting with the 2014 Valuation Date.

\*\* The UAAL amount is the contribution available to amortize the UAAL. It is equal to the total contribution, minus the normal cost.

\*\*\* The actual contribution amount is for the FYE on the June 30 following the valuation date.

## Appendix F: Financial Statement Information

---

The information presented in the required supplementary schedules was determined as part of the actuarial valuation as of June 30, 2019. Additional information as of the latest actuarial valuation follows.

Valuation date	June 30, 2019
Actuarial cost method	Entry Age Normal
Amortization method	Open
Remaining amortization period	5 Years
Asset valuation method	Four-year smoothed market
Actuarial assumptions:	
Investment rate of return*	7.65%
General wage growth*	N/A
Merit salary increases	N/A
*Includes inflation	2.75%

**Appendix F: Financial Statement Information**

Gain and Loss in Accrued Liability During Years Ended June 30 Resulting from Differences Between Assumed Experience and Actual Experience						
Type of Activity	Gain or (Loss) for Year Ending June 30, (expressed in thousands)

2014	-	18,888	19,087	31,281	N/A	100%	65%		

## **Appendix G: Glossary**

---

The following definitions are largely excerpts from a list adopted in 1981 by the major actuarial organizations in the United States. In some cases the definitions have been modified for specific applicability to the Volunteer Firefighters' Compensation Act of the State of Montana. Defined terms are capitalized throughout this Appendix.

### **Accrued Benefit**

The amount of an individual's benefit (whether or not vested) as of a specific date, determined in accordance with the terms of a pension plan and based on compensation and service to that date.

### **Actuarial Accrued Liability**

That portion, as determined by a particular Actuarial Cost Method, of the Actuarial Present Value of pension plan benefits and expenses which is not provided for by future Normal Costs.

### **Actuarial Assumptions**

Assumptions as to the occurrence of future events affecting pension costs, such as: mortality, withdrawal, disablement, and retirement; changes in compensation, rates of investment earnings, and asset appreciation or depreciation; procedures used to determine the Actuarial Value of Assets; and other relevant items.

### **Actuarial Cost Method**

A procedure for determining the Actuarial Present Value of pension plan benefits and expenses and for developing an actuarially equivalent allocation of such value to time periods, usually in the form of a Normal Cost and an Actuarial Accrued Liability.

### **Actuarial Gains and Losses**

A measure of the difference between actual experience and that expected based upon a set of Actuarial Assumptions during the period between two Actuarial Valuation dates, as determined in accordance with a particular Actuarial Cost Method.

### **Actuarial Present Value**

The value of an amount or series of amounts payable or receivable at various times, determined as of a given date by the application of a particular set of Actuarial Assumptions.

### **Actuarial Valuation**

The determination, as of a valuation date, of the Normal Cost, Actuarial Accrued Liability, Actuarial Value of Assets, and related Actuarial Present Values for a pension plan.

### **Actuarial Value of Assets**

The value of cash, investments and other property belonging to a pension plan, as used by the actuary for the purpose of an Actuarial Valuation.

### **Actuarially Equivalent**

Of equal Actuarial Present Value, determined as of a given date with each value based on the same set of Actuarial Assumptions.

### **Amortization Payment**

That portion of the pension plan contribution which is designed to pay interest on and to amortize the Unfunded Actuarial Accrued Liability.

## **Appendix G: Glossary**

---

### **Entry Age Actuarial Cost Method**

A method under which the Actuarial Present Value of the Projected Benefits of each individual included in an Actuarial Valuation is allocated on a level basis over the earnings of the individual between entry age and assumed exit ages. The portion of this Actuarial Present Value allocated to a valuation year is called the Normal Cost. The portion of this Actuarial Present Value not provided for at a valuation date by the Actuarial Present Value of future Normal Costs is called the Actuarial Accrued Liability.

### **Market Value of Assets**

The fair value of cash, investments and other property belonging to a pension plan that could be acquired by exchanging them on the open market.

### **Normal Cost**

That portion of the Actuarial Present Value of pension plan benefits and expenses which is allocated to a valuation year by the Actuarial Cost Method.

### **Projected Benefits**

Those pension plan benefit amounts which are expected to be paid at various future times under a particular set of Actuarial Assumptions, taking into account such items as the effect of advancement in age and past and anticipated future compensation and service credits.

### **Unaccrued Benefit**

The excess of an individual's Projected Benefits over the Accrued Benefits as of a specified date.

### **Unfunded Actuarial Accrued Liability**

The excess of the Actuarial Accrued Liability over the Actuarial Value of Assets.
